Upgrade your organisation with Google Chrome for Enterprise

With ever decreasing budgets and the need to streamline your operations, you need to get the most value out of your IT investments.

Flexible devices, a cloud-first OS and powerful management functionality – Chrome for Enterprise equips your organisation with the tools you need to reduce costs and improve operational efficiency.

CHROME DEVICES

When it comes to the IT infrastructure, both local and central government need a scalable selection of devices that allow you to meet your requirements across the various departments and pillars of your organisation.

Whether you're looking for a full scale desktop PC or fleet of laptops, there's a Chrome device to meet that need.

CHROMEBIT
Turn any display monitor into a desktop PC

CHROMEBOX
Compact PC that connects to one or more displays
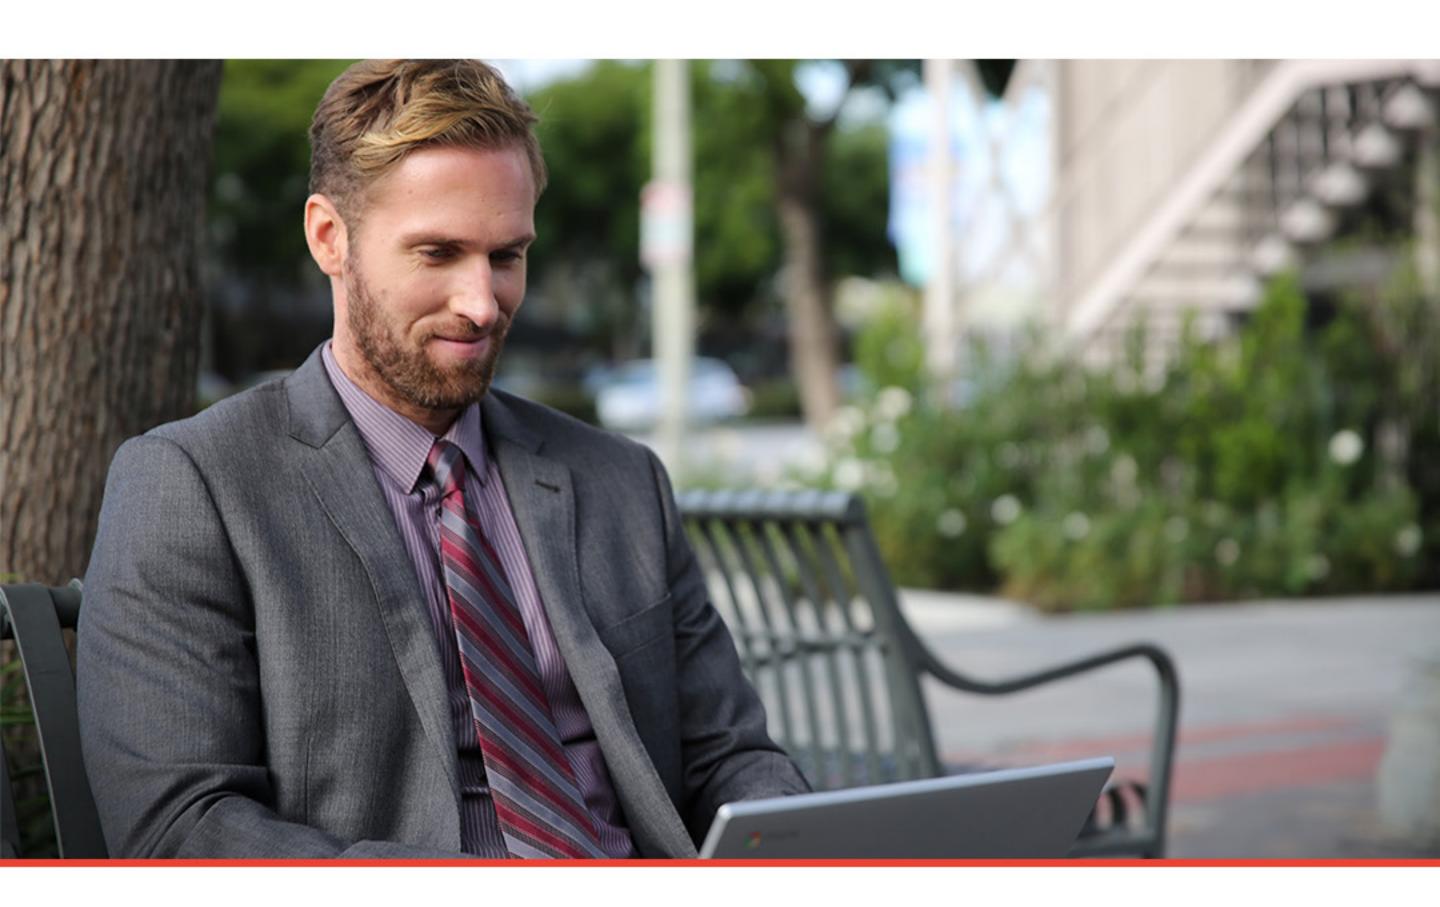

CHROMEBOOK
Laptop with everything you need built-in

CHROMEBASE
All-in-one desktop computer

CHROME OS

Alongside scalable hardware, you need software that is secure, easy to manage and can respond rapidly across the scope of your organisation. A cloud-first operating system like Chrome OS gives you the flexibility you need to keep things moving with the key features below:

SPEED

Chrome OS boots in seconds and maintains performance with automatic updates.

SIMPLICITY

Integrate with existing systems and centrally manage a scalable fleet with ease.

SECURITY

Chrome OS is secure from end-to-end, with hardware protection and seamless security updates.

SHAREABILITY

Cloud based user profiles and Chrome Sync gives you anytime, anywhere, access from any device.

Manage your Chrome devices across your organisation

A Chrome for Enterprise license offers you the functionality and controls to easily manage devices, securely mobilise your employees and reduce costs.

Greater control for IT admins

Manage your entire fleet of Chrome devices with increased flexibility via open management APIs. Manage directly in Google Admin console, and experience greater control and operational efficiency.

24/7 Google support

Automatic OS and security updates, as well as the ability to support users with Chrome Remote Desktop, will reduce your reliance on reactive support. However, your Chrome for Enterprise license will also give you access to 24/7 Enterprise support should the need arise.

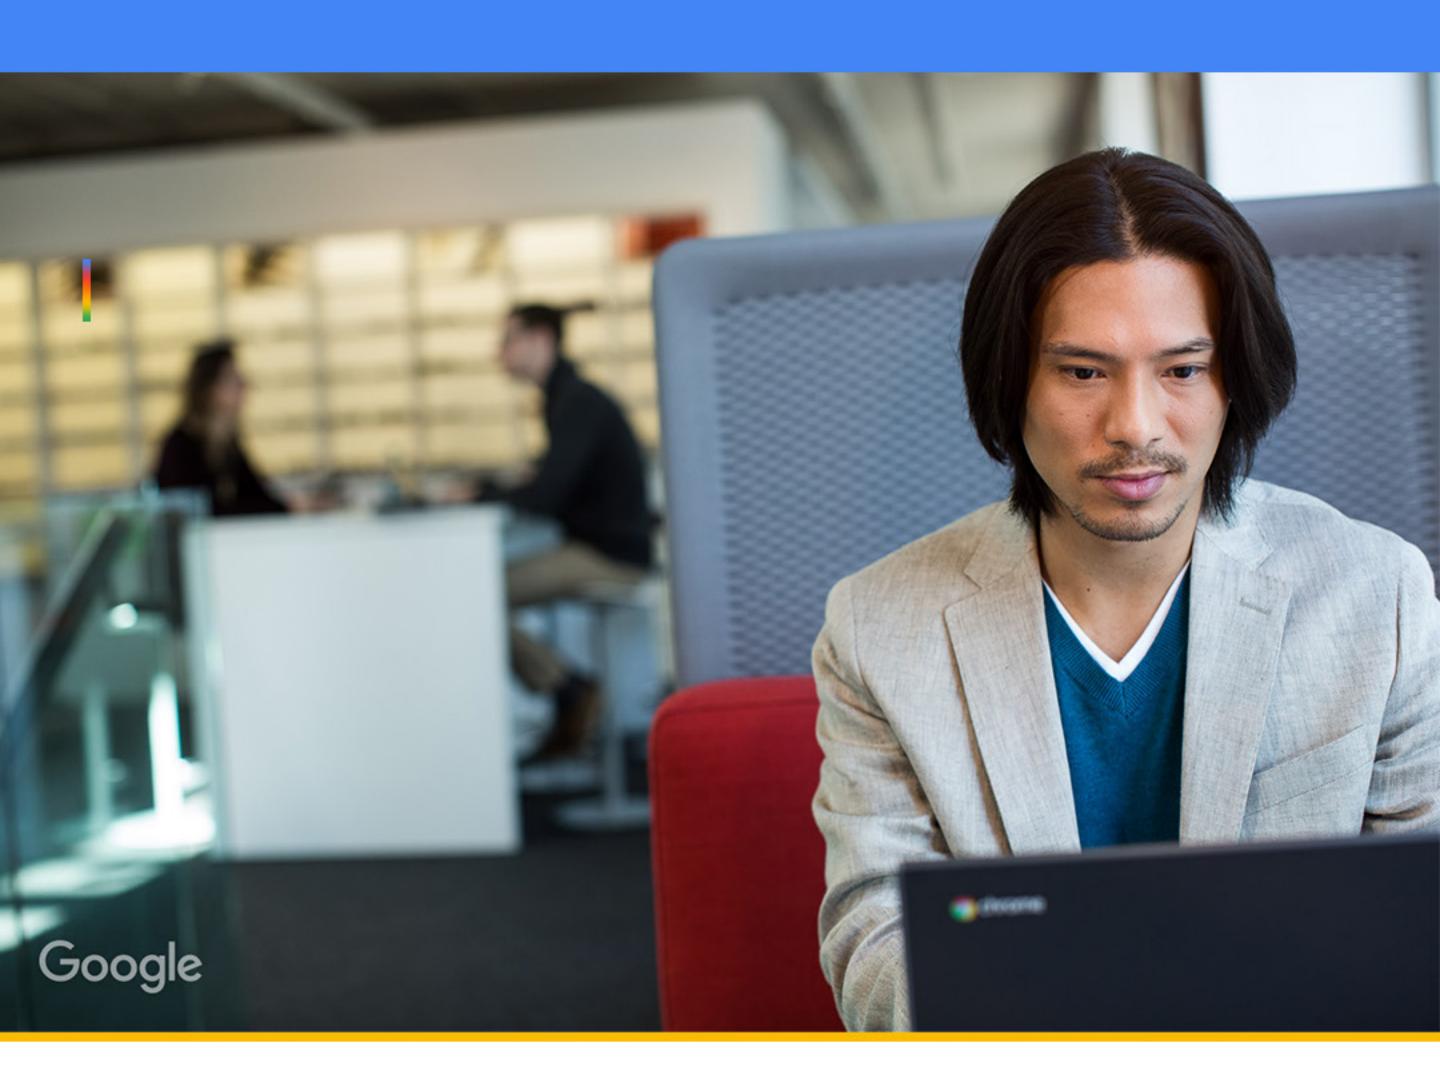

How to transition to Chrome?

If you already have other devices in place – running a Microsoft OS for example – Chrome for Enterprise equips you to transition those devices to a Google environment.

This is done by partnering with VDI solutions such as Citrix and VMware. They allow you to deploy a Chrome solution, but continue to run an alternative OS such as Microsoft until you are ready to fully move to Chrome.

Get a tailored solution

At XMA we know that one size does not fit all – particularly when it comes to the public sector. With this in mind we tailor solutions to suit your organisation's individual needs.

As your Google Chrome partner, we can enhance your IT strategy, including consultancy, training and change management to ensure the success of any project.
